

Krish Rajani

(825)-977-7870 | krajani@ualberta.ca | [linkedin](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

University of Alberta

Expected Graduation: May 2027

BSc (Honors) in Computing Science

Edmonton, AB

- Relevant Courses: Algorithms, Software Engineering, Discrete Mathematics, Machine Learning, Computer Vision, File and Database Management, OOP

EXPERIENCE

Software Development Intern

Sept 2025 – Present

Apex Utilities

Leduc, AB

- Engineered a **Python**-based document relevance classifier using TF-IDF analysis to optimize chatbot training data, reducing dataset size by 64%.
- Developing an AI support bot with **Python**, Azure Bot Framework, and GPT-4 embeddings on PostgreSQL vector storage to automate ticket classification, reducing manual triage workload by 10%.

Software Engineer Intern

May 2025 – Sept 2025

Wrise

Calgary, AB

- Implemented a full-stack AI platform using **TypeScript** and **React** in an agile development team, enabling fans to interact with AI versions of creators trained on their content.
- Optimized video transcription pipeline, cutting processing time by **64%** through zero-cost caption ingestion with SRT parsing and deduplication
- Developed an AI-powered chatbot using GPT-4 with RAG, achieving **99%** relevance in internal testing.

PROJECTS

[FuelWise](#) | *MongoDB, Express.js, Node.js, React.js*

- Engineered a fuel recommendation app that helps users achieve up to **8%** cost savings and **7%** fuel volume gain, serving **100+** users through live station pricing and geolocation analysis.
- Architected a 3-tier caching system with request collapsing and adaptive rate limiting, cutting API costs by **90%** during peak usage
- Ranked fuel stations by distance and price using Google Maps API, enabling accurate travel time estimates and smarter fuel recommendations.

[HealthIQ](#) | *Python, TypeScript, React.js, scikit-learn, Docker*

- Built a health risk prediction dashboard using **Python**, **TypeScript**, and **React** with an ML model achieving 83% classification accuracy.
- Containerized the app with Docker and set up CI/CD with automated unit testing on GitHub Actions, reducing release time by 30%.

[Silent Signal](#) | *Python, AWS, React.js*

- Collaborated to build a real-time noise violation detector using **Python**, **AWS Lambda**, **React.js** and Google's YAMNet model, achieving 95% accuracy across 521+ sound categories.

LEADERSHIP EXPERIENCE

Assistant Director, CSW (TeamUp Science)

May 2024 – May 2025

Edmonton, AB

- Organized and taught Python fundamentals to 20+ high school students during a workshop, improving coding fluency through live exercises.
- Coordinated with mentors and volunteers to develop engaging lesson plans, emphasizing collaboration in curriculum design and student support.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, PowerShell, JavaScript, TypeScript, SQL, HTML, CSS

Frameworks & Libraries: ReactJS, NodeJS, ExpressJS, Redux, PyTorch, TensorFlow, scikit-learn

Databases & Cloud: PostgreSQL, MySQL, MongoDB, AWS, Microsoft Azure, Google Cloud Platform

Developer Tools: Git/GitHub, Postman, Docker, Linux, Windows
